PROFESSIONAL SUMMARY

Data analyst with 10+ years delivering dashboards, forecasting, and operational analytics for contact centers and customer experience programs. Drove a 15% operational efficiency gain through Tableau dashboard infrastructure, reduced reporting cycle time by 30% through multi-source data integration, and surfaced \$32M+ in at-risk customer lifetime value through behavioral churn analysis. Built an AI-driven resume and job intelligence pipeline as a productivity tool.

KEY ACCOMPLISHMENTS

- Built a multi-agent AI pipeline in Python that scrapes job postings, scores role fit against a candidate profile using a configurable five-factor weighted engine, generates tailored resume and cover letter drafts, and writes outcomes to an Excel tracker with deduplication; reduced manual application preparation time by an estimated 80% across daily use.
- Owned the analytics function for four contact center business units at a national telecommunications carrier for seven years, delivering dashboard infrastructure, exploratory analysis, and forecasting work that directly informed staffing, capacity, and process decisions reviewed at senior and executive leadership levels.
- Surfaced \$32.45M in at-risk customer lifetime value through behavioral churn analysis on 225K subscriber records and \$280M+ in unconverted lifetime value through cross-sell propensity analysis on 150K customer households, producing prioritized account lists that concentrated operations and sales outreach on the highest-impact segments.
- Stepped into an interim Retention Manager role earlier in career and led a metric redesign that converted a flat monthly save quota into a percentage-based save rate, phased in quarterly from 22% to 33%, which moved departmental churn performance from the low-60s to 84–87% within three quarters and earned the department its first-ever quarterly churn bonus.
- Built the business case for a dedicated National Spanish Call Center earlier in career by integrating IVR routing data, translation service call records, and market-level Spanish-speaking population data into a single executive presentation; the proposal was approved, launched with 64 agents across four teams, and every team finished in the top 10 nationally with regular top-5 placement.

TECHNICAL SKILLS

Data & Querying: SQL, MySQL, Snowflake, Hadoop, Data Lake, Multi-Source Data Integration

Visualization & Reporting: Tableau, Power BI, MicroStrategy, Dashboard Development, KPI Reporting, Excel (Advanced: Pivot Tables, Interactive Dashboards)

Analytics & Methods: Exploratory Data Analysis (EDA), Data Modeling, Forecasting & Capacity Planning, Root Cause Analysis, Trend Analysis, KPI Development & Monitoring, Quantitative and Qualitative Analytical Methods

Business Skills: Stakeholder Engagement, Cross-Functional Collaboration, Requirements Gathering, Process Improvement, Agile / SCRUM

Tools & Platforms: Nexidia, Avaya, CRM Systems, Microsoft Access, JIRA, GitHub, SharePoint, Microsoft Office Suite

Programming: Python (Pandas, NumPy, scikit-learn, SQL-adjacent EDA and statistical analysis — applied across 9 independent analytics projects; LLM-based text analysis at Charter Communications)

PROFESSIONAL EXPERIENCE

INDEPENDENT ANALYTICS CONSULTANT

Self-Employed | Austin, TX | August 2025 – Present

- Built a 7-stage Python workflow with Claude and prompt caching that scraped job boards, scored fit, and generated ATS-tailored resumes and cover letters at ~\$0.20 per 40-job run, cutting application preparation time by roughly 80%.

- Ran Python and SQL-based EDA and cohort segmentation on 225K telecom subscriber records that isolated early billing and tech-support friction as a 16.7% slice of all churn (\$32.45M in at-risk customer lifetime value), then built an XGBoost classifier (AUC 0.84, 1.84x top-decile lift) to operationalize the finding into a retention-targeting score.
- Segmented 150K insurance households in Python and SQL by channel, tenure, and behavior, finding that abandoned property quotes converted at 2.4x baseline and Elite-tier/independent-agent households converted at 38% (1.5x average CLTV), then used the findings to rank-order the remaining \$280M cross-sell opportunity for outreach.
- Built a 12-query SQL layer and Python EDA across 120K customer satisfaction surveys that isolated resolution ease, wait time, and first-contact resolution as 69% of dissatisfaction risk and \$190M in at-risk lifetime value, translating the findings into a \$36.8M net-value recovery business case.
- Ran comparative cohort analysis in SQL and Python on 60K P&C policies that isolated billing distress as a 19-point lapse-rate driver against a 7-point spread for claims history, quantified an 8.8-point retention edge worth \$131 in incremental CLTV for a digital acquisition channel, and mapped a cross-sell funnel to a \$5.4M renters attachment opportunity.
- Built SQL-driven workforce analytics on 430K HR records in Python that isolated a caseload inflection point (SLA breach rate more than doubling past 25 concurrent cases) and a compensation-ratio risk signal present in 26% of at-risk advisors, then layered an XGBoost model with SHAP explainability (8.1x top-decile lift) to flag \$4.6M in replacement exposure and build a 4.4:1 ROI case (\$125K retention investment projected to return \$552K).
- Investigated 200K health insurance claims across 350 providers using SQL and Python, isolating prior-authorization delays as 35% of denied dollars (\$10.4M) and coverage-limit gaps as a previously unmeasured \$4.07M opportunity at a 59% appeal-success rate, against a \$14.8M full-recovery ceiling.
- Ran Python and SQL EDA on 15K health plan EDI enrollment transactions across four lines of business that isolated a 2x rejection-rate gap between Duals/Marketplace (18%+) and Medicare (8.7%) and a 43% multi-line-of-business coverage exposure rate, then layered a logistic regression risk model (1.65x decile-1 lift) to flag high-risk transactions before submission.
- Built a Python and SQL funnel analysis on 120K call center leads across 45 clinics that isolated callback speed as the strongest scheduling lever (53.9% vs. 43.7% conversion within 15 vs. 60+ minutes) and quantified \$109.6M in scheduled-but-unconverted revenue, then layered a logistic regression model (1.54x decile lift, QA score as the top driver) to rank leads for weekly intervention.
- Automated an Excel tracking workflow with VBA for an 11-person operations team, replacing manual documentation with daily reporting and monthly recaps that freed analyst time for coaching.

DATA INSIGHTS ANALYST

Charter Communications | Austin, TX | August 2018 – July 2025

Began as contract engagement via Apex Systems, August 2018 – December 2018; converted to direct hire December 2018

- Developed 10+ Tableau dashboards and SQL-based KPI reporting assets for four call center business units that improved operational efficiency by 15%.
- Built multi-source analytics workflows with Snowflake, Data Lake, Nexidia, and MicroStrategy that consolidated customer and operational data and reduced reporting cycle time by 30%.
- Engineered forecasting and capacity-planning models with SQL and Python that supported staffing, routing, and process decisions across Inbound Sales, Retention, Mobile, and Repair.
- Applied Python and LLM-based text analysis to customer feedback data to surface early lifecycle dissatisfaction drivers that informed targeted billing and service improvements.
- Led cross-functional analytics delivery with IT, Sales, and Operations teams to standardize reporting workflows and raise customer satisfaction scores by 10%.
- Maintained GitHub- and SharePoint-based analytics artifacts with leadership review to ensure reproducible, audit-ready reporting in a regulated telecommunications environment.
- Delivered executive-facing trend analysis and KPI reporting that strengthened strategic decision-making for senior and executive leadership.

- Managed simultaneous analytics requests across multiple business units by prioritizing high-impact work and aligning delivery with evolving business priorities.

CUSTOMER ADVISOR

Alorica | Austin, TX | February 2018 – August 2018

- Managed customer cases end-to-end, resolving escalations and ensuring service satisfaction.
- Analyzed dealer and customer data to identify workflow inefficiencies and supported process improvements.
- Partnered with field and corporate teams to coordinate solutions for high-profile cases, improving first-time resolution rates.

CALL CENTER SUPERVISOR

Centene Corporation (Cenpatico) | Austin, TX | January 2013 – August 2017

- Supervised 12–23 representatives across a multi-state government-contract operation while maintaining SLA compliance and quality standards for every state served.
- Monitored queue performance in real time with Avaya and CRM tools, adjusting staffing and routing to meet contract requirements and support compliance.
- Applied behavioral-based coaching methods with NICE QA audits that sustained team quality scores above 94% and strengthened coaching consistency across supervised teams.
- Built Excel-based coaching documentation and performance tracking tools that became the standard for supervisors across the organization, reducing administrative effort and standardizing coaching practices.
- Developed KPI and metrics reports for executive leadership that informed staffing, IVR routing, and performance benchmark decisions across the multi-state operation.

CUSTOMER SERVICE REPRESENTATIVE (TEMP PLACEMENT)

Healthcare Support Staffing | Centene Corporation (Cenpatico) | Austin, TX | October 2011 – January 2013

Contract/Temp placement — dates MUST be shown: October 2011 – January 2013

- Performed as an advocate focused on resolving routine inquiries, issues, and concerns for members and providers.
- Assessed and researched member and provider inquiries to determine root causes and initiated corrective actions.
- Documented member and provider information in CRM applications for quality assurance and performance tracking.
- Delivered customer service in a high-paced contact center environment via phone, live chat, and email.

CUSTOMER SERVICE REPRESENTATIVE

Progressive Insurance | Austin, TX | November 2008 – June 2011

- Handled inbound calls regarding renewals, coverage, billing, eligibility, and policy changes in a fast-paced environment.
- Educated customers on insurance products and services, supporting retention and growth strategies.
- Maintained accuracy across multiple computer systems while meeting quality and performance goals.
- Upheld customer care standards by meeting individual goals for call quality, handling time, and first-call resolution.

TECHNICAL TEAM SUPERVISOR

DIRECTV | Tulsa, OK | October 2004 – September 2008

- Led a team of 12–18 billing and technical support agents while maintaining quality, attendance, and schedule adherence expectations in a high-volume contact center.
- Applied behavioral-based coaching methods with Excel-based dashboards that made performance conversations more targeted and productive for individual agents.
- Sustained team quality scores above 94% through regular call calibrations and consistent coaching without sacrificing handle time or schedule adherence.

CALL CENTER SUPERVISOR — PROGRESSIVE ROLES: BILINGUAL CSR TO NATIONAL SPANISH CALL CENTER SUPERVISOR

US Cellular | Tulsa, OK | July 1999 – August 2004

- Started as one of 88 bilingual agents during US Cellular’s transition to a five-region national call center model and advanced to supervisor within the first year.
- Supervised 18–32 representatives across general and bilingual customer service teams while building Excel-based tracking dashboards for QA, attendance, schedule adherence, and product knowledge.
- Stepped into an interim Retention Manager role and redesigned the save metric from a flat monthly goal to a percentage-based save rate, improving departmental churn performance from the low-60s to 84–87% within three quarters.
- Used structured testing of retention offer sequencing to set a consistent team standard and improve attachment outcomes across conversations.
- Pulled IVR routing and translation-service data across five regional centers to build the business case for a dedicated National Spanish Call Center, which launched with 64 agents across four teams and achieved top-10 national placement.
- Designed training programs and coaching tools for bilingual agents, strengthening product knowledge and performance consistency across the team.

EDUCATION

Western Governors University — Pursuing Bachelor's in Data Science

Howard Payne University — Coursework in Elementary Education

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Data Science with SQL and Tableau — eCornell University (2024)
